

Land EKG™ Pasture Grazing Cage Template Made from Welded Cattle Panel

Grazing cages can be useful to monitor utilization levels in grazing pastures or areas. Cut these sections out of the cattle panel with bolt cutters or a cutting torch. Use the bottom section to make Cage Anchors as shown below.

Interweave the panel corners and attach with small carabineers or wire. To fully protect grass within the cage, use small posts, lath, or remaining panel rod to cover sections at the corners edge.

Attach the cage in the pasture by firmly by “stepping in” three “Cage anchors” along each section of the cage (total of 9/cage)
