

# Land EKG™ Pasture Grazing Cage Template Made from Welded Cattle Panel

Grazing cages are great to track utilization levels in pastures or range areas. In the diagram below, areas in red will be cut away from green sections of the cattle panel with bolt cutters or torch. The bottom sections left can then be used to make cage anchors. The very bottom rod will be used for corner weave rods.

Make anchors from this 2<sup>nd</sup> to last row

First interlock each panel corner to stabilize. To further strengthen cage and protect interior grass, weave 1 of 3 remaining long rods through each corner edge of the pyramid in an over-under fashion.

Anchor the cage down by firmly “stepping in” or pounding in the 9 cage anchors along each section of the cage (total of 3/side) that were made from the bottom section of the cattle panel.
